

Why Use Tim Stegall Carpet?

With my previous 22 years of carpet installation, I am in a unique position to understand and correct many of the problems associated with ordinary carpet stores.

You get personalized attention from the original estimate through the installed product. This attention to detail helps insure the job will go smoothly.

Each carpet I send out is visually inspected for defects. In addition, all carpets are hand cut and hand measured for accuracy. When the mechanic arrives to install your new carpeting, you can be assured there will be no unpleasant surprises.

Classen Laminate Flooring is made using direct-pressure laminate technology. The decorative layer* k along with the wear layer j lies on top of the supporting layer made from high-density fiberboard (HDF) l. The balancing layer m is located beneath the supporting layer. These are floors engineered for a long life.

*The wear layer is filled with tiny particles of aluminum oxide, the fourth hardest substance in the world. How tough is it? It's the wear layer technology of choice in 90% of today's bowling alleys.

We feature **CLASSEN** Laminate Flooring

UltraLock: A patented form of tongue and groove firmly locks the elements together, both lengthwise and crosswise. It is faster and easier to lay the floor whether it is done by a professional or a do-it-yourselfer.

The Better Alternative to Pergo
